How a Bank-Owned Factor Cut Its Close Time by 40% While Doubling in Size

Time to close cut by 40% or more. Thousands of invoice updates processed in minutes. A business that doubled in size during the move.

CASE STUDY

2026

INTRODUCTION

overview

Integra Funding Solutions, a division of T Bank, N.A., moved to FactorCloud while its business was growing fast. FactorCloud helped its team handle that growth: Integra has cut its time to close by 40% or more, and integrations built on FactorCloud's open API now process thousands of invoice updates in minutes.

what we'll cover

The challenge

Collections organized by client instead of by debtor, and a vendor that couldn't change it.

The move

Why Integra chose FactorCloud, and getting the accounting right for a bank.

The results

What Integra built on the API, the numbers, and Danny Mourning's advice for other bank-owned factors.

IN HIS WORDS

"You cannot scale factoring if you don't have debtor-scoped collections. Full stop."

Danny Mourning, Esq., EVP of Operations and Senior Legal Counsel, Integra Funding Solutions

AT A GLANCE

Integra on FactorCloud

COMPANY	Integra Funding Solutions, a division of T Bank, N.A. (Member FDIC)
HEADQUARTERS	Fort Worth, Texas
FACTORING TYPE	Transportation and general factoring, including staffing, oil and gas services, aerospace and manufacturing
PREVIOUS PLATFORM	A legacy factoring platform
WHAT THEY BUILT	A collections layer and account debtor integrations on FactorCloud's API, organized by debtor instead of by client
KEY RESULTS	Time to close cut by 40% or more. Thousands of invoice updates processed in minutes. Doubled in size, with FactorCloud helping the team handle that growth. A collections capability that took 8 months with a past vendor was set up in 5 weeks.

PROJECT BACKGROUND

about Integra

Integra Funding Solutions is the invoice factoring division of T Bank, N.A., a federally chartered national bank. Unlike most factoring companies, which are privately funded, Integra advances money from a bank's balance sheet and operates under federal banking oversight.

Integra funds clients the same day when approved invoices arrive before its 1 PM Central cutoff. Its funding advisors specialize by industry, with freight and transportation alongside staffing, oil and gas services, aerospace and manufacturing. The company is a member of the International Factoring Association.

That mix of bank-grade requirements and same-day speed puts pressure on the software underneath it. Integra needs accurate ledgers and secure data for its examiners, and it needs its team to move fast for its clients.

CUSTOMER

meet Danny Mourning

EVP of Operations and Senior Legal Counsel

Danny Mourning runs Integra's operations and legal functions. He started his career in factoring before becoming a lawyer, handling workouts and the most difficult accounts. His employer later sent him to law school, and he became an attorney in 2012.

He brings the same view to Integra's systems: the rules of the business should be reflected in the tools the team uses every day.

How he evaluates software

"Factoring is an industry based on rules. If you know those rules and you understand the hierarchy, the clarity is unbelievable. It's a secured transaction at its core."

WHAT DRIVES INTEGRA'S RESULTS

- Factoring experience
- A design mind
- The refusal to accept anything that's not right

INTRODUCTION

the challenge

On its previous platform, Integra's team could pull a list of clients and open each client to see its invoices. What they could not get was the reverse: a live view of each debtor with every client that debtor pays.

CLIENT-BY-CLIENT

Open each client to see its invoices

PROBLEM

No live debtor-first view of every client a debtor pays

MANUAL WORK

Log in and out of each client. Hours of collection notes

SPILLOVER

Account managers and auditors pulled into collections

COLLECTIONS ORGANIZED THE WRONG WAY

THE PROBLEM

collections organized the wrong way

Danny asked his previous vendor for a debtor-first view: an interactive page where he could filter by debtor, then by client, instead of an aging report to print and rework in Excel. The vendor's support team said they didn't have it. When he raised it with the vendor's leadership, the answer was the same.

For a factor at Integra's scale, that gap limits growth.

> "Back in the day, it's like you're in The Matrix. You think things are a certain way, but you're not plugged into anything. You don't have the visibility that you could have, nor do you have the control."
>
> Danny Mourning

THE PROBLEM

problem context

"One debtor will send you a spreadsheet with over 1,000 invoices on it, and those invoices may apply to 500 clients, two invoices apiece. If you collect client by client, that's 500 calls dealing with two invoices at a time."

Even when a debtor sent one spreadsheet covering all of Integra's clients, the team had to log in and out of each client to work it, instead of handling the whole debtor on one page. Entering the collection notes alone took hours. The workload spread across the company: account managers and auditors pitched in on collections, and the team spent its days reacting to problems.

THE PROBLEM

a world of constant triage

> "You live in a world of constant triage. Constant stress. You cannot improve. You're constantly filling potholes, filling in gaps, chasing down integrations that break with brokers. And it's not just [our previous system]. It's quite honestly any other system I've seen that doesn't have the paradigm perspective that FactorCloud has."

Danny Mourning

WHY FACTORCLOUD

two reasons to move

Integra moved to FactorCloud for two reasons: full access to its own data, and a vendor that acts on feedback.

Full access to its own data

FactorCloud is built API-first. Integra's developer can read and write the same data that FactorCloud's own screens use, so Integra is not limited to the features FactorCloud ships. When Integra needs a workflow that doesn't exist yet, it can build it.

A vendor that acts on feedback

Where the previous vendor's support team and leadership both said no to a debtor-first view, Integra wanted a partner that listens, acknowledges feedback and pivots.

> **"FactorCloud has built the connection points for us, between us and our information and us and our account debtors. That's the secret sauce behind FactorCloud. We couldn't do that in [our previous system]."**
>
> Danny Mourning

GETTING THE ACCOUNTING RIGHT FOR A BANK

bank-grade requirements, cleared

As a division of a national bank, Integra had requirements to clear before it could sign.

Secure client data

Integra needed to confirm that its clients' data would be secure.

Correct ledgers

Its accounting and ledgers had to be correct from a regulatory standpoint.

Cash to accrual

The move coincided with Integra's shift from cash-based to accrual-based accounting.

About 20 hours

Danny estimates the two teams spent about 20 hours in meetings working through it.

> "Making those adjustments is not an easy task, and FactorCloud really made that seem easy. That was a big concern at the beginning. But it got resolved, and since we've onboarded, we've been able to close our books faster. We've cut our time to close by 40% or more."

WHAT INTEGRA BUILT ON THE API

collections, organized by debtor

With the accounting settled, Integra turned to collections. Using FactorCloud's API, Integra built a layer on top of FactorCloud that is organized around debtors, the way Integra's collectors work.

Debtor-first collections

A collector opens one debtor and sees every related client and invoice on a single page. No logging in and out of each client.

Multi-note

The collector selects the relationships they want, writes one note and saves, and the note posts to every selected invoice in FactorCloud at once. Work that took hours of manual entry now takes one action.

Account debtor integrations

"The setup with FactorCloud has enabled us to make integrations with account debtors that process thousands of invoice updates (verification, collection, and delivery of invoices to portals) in minutes."

WHAT INTEGRA BUILT ON THE API

built in plain language

Integra builds these tools with AI. Its developer works with an AI coding assistant against FactorCloud's API, describing what the team needs in plain language and refining the result.

The pace has surprised even Danny, who has worked with large product teams before.

PROCESS

Integra's rules for a collections screen

Danny credits Integra's results to three things: factoring experience, a design mind, and "the refusal to accept anything that's not right." Those show up in the rules Integra follows when it designs its tools.

RULE 1

Show the work, don't email it

"I always hear people say, can we send an email alert? Please, no. Don't fill my email box with alerts. The system should show me all of the work I need to accomplish today in a neat and organized way."

RULE 2

Keep it on one screen

"I don't want to work on multiple screens."

RULE 3

Use slide-outs, not pop-ups

"You don't want pop-ups. You want maybe slide-outs that are temporary."

RULE 4

Build what's missing

"If FactorCloud doesn't provide it, at least they provide the API so that you could have someone with a design mind who does do it."

DECISION

Refuse anything that's not right

Factoring experience plus a design mind, applied on an open API.

THE RESULTS

room to grow, and time back for relationships

Integra doubled in size over the period it moved to FactorCloud. Danny is careful about the credit: the growth was already underway during the migration. "FactorCloud helped us to handle that growth," he said.

For a bank division, handling growth means the same ledgers stay accurate and the same team keeps up. Integra has cut its time to close by 40% or more, and its debtor integrations process thousands of invoice updates in minutes.

faster time to close

40%+

in size during the move

2X

invoice updates processed in minutes

1,000s

THE RESULTS

the team spends its time differently

Collections stay with collections

Collections work now stays with the collections team, without account managers and auditors stepping in.

Missing paperwork, handled together

Clients still sell Integra invoices that are missing something, such as a bill of lading, and that has to be resolved. "If you have 150 invoices that are missing paperwork, that's substantive. That adds up to thousands and thousands of dollars." The collections team handles it together.

Time back for their own work

Auditors focus on their own work and account managers get time for their clients, which matters in a business where clients can leave for a better rate at any time.

THE RESULTS

"You want it to feel like Cheers."

"Factoring is a game of attrition. Clients are constantly looking for the best rate and the best relationship. When they call in, you don't want them on hold for 10, 12, 15 minutes. You want them to speak to somebody quickly and feel appreciated. You want it to feel like Cheers."

That is especially true in transportation, where many clients are owner-operators alone in the truck. With time back, account managers can have real conversations instead of rushed ones.

> "What you do with your time when you find efficiencies is that you start selling. It's telling the client that they're valuable, that you're going to listen to them, that you're going to understand their business. Where do they get their fuel? Where do they get their tires? Why do we have a trailer misuse issue? You can have that conversation with them, as opposed to, 'Hey, you owe us the money. Charge it back, and away you go.'"

SCHEDULE A DEMO

ADVICE FOR OTHER BANK-OWNED FACTORS

"FactorCloud will get you to a yes."

Asked what he would tell a bank-owned factor that is hesitant to choose a smaller software vendor, Danny was direct.

Nimble, not by committee

"When you talk to these other companies, if they're larger, they're likely not nimble. They're likely going to listen to your feedback and then judge it in committee. And it's highly likely that none of them have ever done what you've done."

A relationship built on regular contact

Integra meets with FactorCloud regularly. "FactorCloud will acknowledge when you've given it advice. Sometimes they put it on the back burner, but then they circle back and say, this was right. They'll acknowledge it and pivot. The communication is absolutely there."

FINAL THOUGHTS

Open APIs and AI changed what a factor can build

Danny sees the timing as important. In his view, open APIs and AI tools have come together in a way that changes what a factor can build for itself.

> **"FactorCloud is at a point that a lot of other software providers are not at. FactorCloud clients can do with this system what they need, which is unlike anything I've ever seen. It's only because of FactorCloud's willingness to expose their APIs and have well-structured APIs, and AI's ability to listen to plain language, that you can make this a really cool, couture solution for factoring software, which is a niche."**

CASE STUDY

INTEGRA FUNDING SOLUTIONS

40%+

faster time to close, while doubling in size

Integra Funding Solutions, a division of T Bank, N.A., moved to FactorCloud while its business was growing fast. Integra has cut its time to close by 40% or more, and integrations built on FactorCloud's open API now process thousands of invoice updates in minutes.

---

customer

Integra Funding Solutions, the invoice factoring division of T Bank, N.A. (Member FDIC), Fort Worth, Texas. Transportation and general factoring, including staffing, oil and gas services, aerospace and manufacturing.

- Time to close cut by 40% or more
- Thousands of invoice updates processed in minutes
- Doubled in size, with FactorCloud helping handle that growth
- 8 months with a past vendor, set up in 5 weeks

---

problem

On a legacy platform, collections were organized by client, not by debtor. One debtor spreadsheet could cover 500 clients: 500 calls and hours of note entry.

context

A bank-owned factor with same-day funding and federal oversight. It needs accurate ledgers and secure data for examiners, and a team that moves fast for clients.

---

solution

A collections layer and account debtor integrations built on FactorCloud's API, organized by debtor instead of by client.

Debtor-first collections: one debtor, every client and invoice on one page.
Multi-note: one note posts to every selected invoice.
Account debtor integrations: verification, collection and portal delivery in minutes.
